wherever you ride

A uvex bike helmet is the right companion on any ride. At any time. In slow-moving traffic. On fast roads. Day and night. Be seen and stay safe. Beyond your city's limits. Velodrome, trail, or singletrack. With smart designs, superior ventilation, and unbeatable safety.

For exceptional protection, 24/7, 365 days of the year – uvex is the go-to choice.

I don't try
my best.
I do my best.

Johanna Moßhammer
Fitness Athlete | Road Cycling Enthusiast

protecting planet

The entire uvex group has set highly ambitious goals – for environmental protection and a greener future. For many years, we have been working together to reduce and neutralize our ecological footprint: with a special focus on climate protection, the careful use of raw materials and resource-saving processes in the production of our entire product range.

”Today, our mission **protecting people** is more relevant than ever. Based on our obligation to protect people, the uvex group has always been aware of its responsibility to society and the environment. I am firmly convinced that the topic of sustainability will continue to pick up speed even after the coronavirus pandemic has ended. Against this background, the entire uvex group has committed itself to long-term CO₂-neutral growth.

Michael Winter
Managing Partner
of the uvex group

1,113 tons of CO₂ savings

By relocating production and supply chains from Asia to Europe, we save 1,113 tons of CO₂ every year. And every year it will be more.

Eyewear frames made from recycled fishing nets

Protecting the ocean: Thanks to the resource-saving recycling process of old fishing nets, for the uvex ocean series, we do not use crude oil in the process of producing the collection's frames: that's how we save up to 55% of CO₂. Additionally, we use 100% biodegradable material for the lenses and sustainable packaging. And all of this without sacrificing function or design.

protecting planet

Local production in Germany, energy saving programs, heat recovery in our own plants and an increased use of sustainable materials and sustainable packaging: with a growing number of measures, we are protecting people and our planet.

See more

uvex city 4 MIPS

In the event of a fall, the human brain can be exposed to strong rotational movements as a result of an oblique impact. MIPS, the Multi-Directional Impact Protection System, offers comprehensive protection for various uvex bike helmets. New: uvex city 4 MIPS. A trendy city helmet – equipped with the MIPS safety system. Uncompromising protection, cool look.

Mips

uvex quatro integrale Tocsen

The revolutionary Tocsen sensor stores movement patterns and detects every fall with the utmost precision. If the cyclist does not confirm that they are okay, the innovative Tocsen app automatically sets off an emergency call together with the GPS data of the scene of the accident. New: the enduro helmet uvex quatro integrale Tocsen in the colorway deep space – with the crash sensor already integrated in the IAS dial.

TOC
SEN

uvex finale light 2.0

Maximum safety – even in poor lighting conditions. The uvex finale light 2.0 with its 44 integrated LEDs ensures perfect visibility in the city. The LED sensor system detects the ambient light and switches the helmet's lights on or off. Completely automatically. This makes the innovative city helmet a perfect, stylish companion.

LED
INTEGRATED

highlights 2021/22

uvex technologies

Increased visibility through innovative sensors, integrated special protection or smart safety system: uvex offers a variety of bike helmet technologies that make every ride so much better. LED lights integrated within the helmet's shell can prevent accidents, a MIPS layer absorbs the dangerous rotational energy in the event of a fall and the unique Tocsen crash sensor intervenes and automatically calls for help when an accident has occurred. Protecting people through intelligent systems – an epitome of our brand's mission.

uvex trend colors

Cars or fashion: Soft, muted versions of classic colors are more popular than ever. From rich blue to deep purple to elegant grey-beige. The uvex design team has translated the trend colors of 2021/22 into a perfect color concept and selected colorways – brought to life in the all-new uvex city 4 collection, among other product ranges. The cool color schemes deep space, sand and plum fit together with the clear and compact lines of the uvex city 4, the popular city helmet: the perfect finishing touch of every #ootd.

The three subdued, ultra-modern tones can be combined with almost any color. The grid point color gradient – from the respective trend color to classic grey – provides elegant accents: for cool life-style vibes in the city.

sand

The softest fashion statement of the year. Beige, greige and sand tones are more than popular: in your own four walls or in your wardrobe. The unique, matt greige gradient is particularly elegant in the uvex city 4 MIPS. If you prefer a shiny finish and fast bikes, pack the light, stylish uvex rise racing helmet in the colorway sand.

deep space

Timeless, durable, elegant. Blue is and remains a permanent guest at the fashion shows. With the colorway deep space, uvex brings a rich midnight blue together with fine glitter accents onto the helmet – and onto various models in the uvex collection. Whether uvex city 4 MIPS, the allrounder uvex active cc or the MTB variant uvex quattro integrale Tocsen.

plum

In combination with elegant, black accents, like in the uvex rise cc, or minimalist and modern, like in the uvex city 4 MIPS: The pleasantly soft plum color, featuring the unusual grey gradient, is the styliht among the feminine color variants of the uvex helmet collection.

uvex women's edition

Women know exactly what they want. In the city or on the mountain pass. Short trip or gnarly climb. Bodysuit, cycling shorts, jersey or stylish trench. The women who wear our helmets are as diverse as their preferences for sport and fashion – just as their demands on form, function, design and wearability. With the new and unique uvex women's edition, we meet their wishes and needs. Whether on the ski slopes, in the riding arena or on the bike saddle. The result is a collection with finely tuned, feminine and stylish designs that uvex dedicates entirely to the women in sport.

Whether slim-cut, high-performance uvex rise cc WE for racing bike enthusiasts or everybody's darling in city traffic: the uvex city 4 WE with soft color gradients and trendy design patterns. The new uvex women's edition is the answer for all women who don't want the same thing and who don't care for "pretty in pink".

wherever (WE) ride

uvex city 4 WE

Thanks to our state-of-the-art inmould technology, the uvex city 4 WE is not only ultra-light and comfortable, but also ultra-safe. The perfect wearing comfort is only surpassed by the striking premium look featuring soft color combinations that elevate the city helmet to a fashion accessory. The plug-in LED at the back of the head provides extra safety on the way home.

dust rose - grey wave mat

uvex rise cc WE

The slim-cut uvex rise cc WE with its modern black design and tiny, shiny gold flakes catches the eye beautifully – and can be combined with virtually everything. The high-quality mix of rich black and glitter is just made for her, in fast races or on the go. Truly a girl's best friend.

black goldflakes

uvex rise cc WE

The strikingly elegant silver-plum colorway with a silver-colored front and a deep purple rear impresses with design and function at the same time: the inner lining of the uvex rise cc WE, consisting of a one-piece functional head padding, ensures ultra-comfort even on fierce climbs.

tech summary

Tested to standards Anyone riding with uvex bike helmets rides on the safe side. Because every one of our bike helmets undergoes tough tests in the uvex testing center.	European cycling helmet standard EN 1078:2012+A1 	Additionally GS-tested  The voluntary test mark "GS" stands for "Geprüfte Sicherheit" ("tested safety"). Find details about test criteria: www.tuv.com
--	--	---

Shell materials			
PC inmould//double inmould Safety thanks to the strongly bonded PC shell. Double inmould for extra protection along the lower edge.	ABS hardshell Proven technology has a hard shell for highly effective protection.	EPS hardshell//inmould Protective material made from microscopic air chambers, which absorb the incident forces of an impact.	

Shell constructions				
Hardshell The helmet has a molded outer shell and EPS inner shell for the most efficient safety combination: impact resistant on the outside, shock-absorbing on	the inside. This complex construction allows perfectly placed air vents and channels to be built in, for exceptional wearing comfort.	Double inmould The proven inmould construction is fitted with a second PC shell. It gives extra protection to the outer edge from damage.	Inmould The protective EPS is foamed directly into the polycarbonate shell. For a lightweight helmet construction with the highest impact resistance and the perfect fusion of EPS inner layer and PC outer layer.	

Fit				
Shell sizes Whether large or small, rounder or squarer: uvex has the perfect shell size, ranging from 48 to 65 cm, for every head in its range.	MIPS An angled impact generates rotational movements that can cause serious injuries. The MIPS system can reduce the rotational movements and thus reduce the risk of brain damage.	MIPS + height adjustment The added height adjustment into the MIPS layer provides even further safety and comfort.	FAS Fast Adapting System straps can be easily and continuously tailored to fit your precise head shape.	
Monomatic The uvex monomatic comfort fastener can be opened and closed with just one hand.			Tocsen The unique system, comprising the innovative crash sensor and the Tocsen app, detects a fall, asks how you're doing and makes an emergency call including GPS location data, if there is no response.	

Comfort				
Vent systems uvex places the highest value on optimal ventilation: Cleverly designed ventilation openings draw fresh air in and expel warm air.	Lining Basic pads Removable and washable padding. Functional pads (one-piece) High-quality, moisture-absorbing functional material without antibacterial treatment.	Vent pads (one-piece) High-quality moisture-wicking material with embossed ventilation openings. Comfortable and soft on the skin, quick-drying, removable, and washable.	X-fit pads High-quality, structured material for improved ventilation. Removable, washable padding.
