Schlieren, 30 March 2020

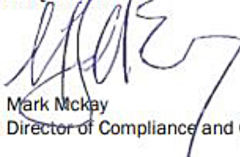

---

Dear Valued Customer,

Having regards to the safety of HeiQ Viroblock Masks; by means of this letter we inform you that they have been tested and shown to be safe for human use as follows:

- A full biocompatibility testing, according to ISO 10993-1 (surface devices category). Was performed to exclude any potential safety issue.
- A human patch dermatological testing was similarly performed, which demonstrated a perfect skin compatibility.
- Finally, an extractable study under dynamic airflow conditions was performed on a similar mask, which showed that absolutely no substance was released from the mask.
